

Principles of System Administration

Jan Schaumann
`jschauma@netmeister.org`

February 6, 2018

Contents

Preface to the preface	i
Preface	ii
I Introduction and General Concepts	1
1 Introduction	2
1.1 What exactly does a System Administrator do?	3
1.2 The Profession of System Administration	6
1.3 System Administration Education	9
1.3.1 Challenges in System Administration Education	11
1.4 The Three Pillars of Exceptional System Design	13
1.4.1 Scalability	14
1.4.2 Security	16
1.4.3 Simplicity	19
1.5 The Future of System Administration	20
Problems and Exercises	23
Problems	23
Exercises	24
2 Unix	28
2.1 Unix History	28
2.1.1 The Operating System	28
2.1.2 Networking	35
2.1.3 Open Source	37
2.2 Basic Unix Concepts and Features	38

<i>CONTENTS</i>	2
2.2.1 The shell	39
2.2.2 Manual pages and documentation	42
2.2.3 A portable, multitasking, multiuser system	44
2.2.4 The Unix Philosophy	46
Problems and Exercises	50
Exercises	51
3 Documentation Techniques	55
3.1 System Documentation Writing 101	56
3.1.1 Know Your Audience	56
3.2 Online Documentation	58
3.3 Different Document Types	59
3.3.1 Processes and Procedures	60
3.3.2 Policies	61
3.3.3 Online Help and Reference	62
3.3.4 Infrastructure Architecture and Design	63
3.3.5 Program Specification and Software Documentation	64
3.4 Collaboration	65
3.5 Formats	66
Problems and Exercises	68
II Fundamental Technologies and Concepts	70
4 Of File Systems and Storage Models	74
4.1 Introduction	74
4.2 Storage Models	76
4.2.1 Direct Attached Storage	76
4.2.2 Network Attached Storage	78
4.2.3 Storage Area Networks	80
4.2.4 Cloud Storage	83
4.2.5 Storage Model Considerations	86
4.3 Disk Devices and Interfaces	87
4.3.1 Physical Disk Structure	90
4.4 Dividing and Combining Disks	92
4.4.1 Partitions	93

4.4.2	Logical Volumes	97
4.4.3	RAID	99
4.5	File Systems	106
4.5.1	File System Types	106
4.6	File System Layout	110
4.7	The Unix File System	112
4.8	Conclusions	118
Problems and Exercises		122
Problems	122
5	Software Installation and Package Management	126
5.1	Introduction	126
5.2	Types of Software	128
5.2.1	Up and down the software stack	128
5.2.2	Operating System vs. System Software vs. Third Party Software	135
5.3	File System Layout	137
5.4	OS Installation	141
5.4.1	Identifying server requirements	142
5.4.2	OS Installation Overview	143
5.4.3	OS Installation Details	147
5.5	Package Management Systems	151
5.5.1	“Manual” Software Installation	151
5.5.2	Software Installation by Package Manager	153
5.5.3	Inherent Security Risks	158
5.6	Managing Software Updates and Patches	160
5.7	Conclusions	163
Problems and Exercises		166
Problems	166
6	Of Users and Groups	170
6.1	Introduction	170
6.2	Types of Users	171
6.3	Groups of Users	175
6.4	User Authentication	177
6.4.1	Authentication Examples	179

6.4.2	The Problem with Passwords	181
6.4.3	Sharing root	183
6.5	Summary	184
Problems and Exercises		188
	Problems	188
7	Configuration Management	191
7.1	Introduction	191
7.2	Services, not Single Points of Failure	194
7.3	Defining Services and Requirements	195
7.3.1	Example Service: Syslog	196
7.3.2	Example Requirements: LDAP Client Configuration . .	197
7.3.3	CM Requirements	199
7.4	Of States and Sets	204
7.4.1	States	204
7.4.2	Sets	207
7.5	Fighting entropy	210
7.5.1	Deployment roles	210
7.5.2	Idempotence and Convergence	214
7.5.3	Quis custodiet ipsos custodes?	217
7.6	Even more formal process definitions	217
7.7	Summary	218
Problems and Exercises		222
	Problems	222
8	Automation	226
8.1	Introduction	226
8.2	Of Laziness And Other Virtues	227
8.3	Benefits of Automation	229
8.3.1	Repeatability	229
8.3.2	Reliability	230
8.3.3	Flexibility	232
8.4	Who benefits from automation?	233
8.4.1	Ourselves	234
8.4.2	Our Peers	234
8.4.3	All Users	235

8.5	Levels of Automation	236
8.6	Automation Pitfalls	238
8.6.1	Increased Complexity and Impact	238
8.6.2	Loss of Audit Trail	240
8.6.3	Loss of Accountability	240
8.6.4	Safeguards	241
8.7	Summary	243
Problems and Exercises		246
	Problems	246
9	Building Scalable Tools	249
9.1	Introduction	249
9.2	How Software evolves	251
9.2.1	Scripts	252
9.2.2	Programs	253
9.2.3	Software Products	254
9.3	Principles of Developing Robust System Tools	256
9.3.1	Unix Philosophy and User Interface	257
9.3.2	Principle of Least Astonishment	263
9.3.3	Explicit and predictable failure	264
9.3.4	There's no such thing as a temporary solution.	265
9.3.5	Readability counts	266
9.3.6	Of Buses and Windows	268
9.3.7	Code Reviews	270
9.4	Additional Guidelines	270
9.5	Summary	272
Problems and Exercises		274
	Problems	274
10	Networking	278
11	Security	279
11.1	Authentication and Authorization	279

<i>CONTENTS</i>	6
III Managing Complex Services	280
12 Managing System Services	282
13 Backup, Failover, and Disaster Recovery	283
13.1 File System Backups and Snapshots	283
14 Monitoring and Visibility	284
IV Meta Matter	285
15 Everything We Haven't Covered	287
15.1 Containers	287
15.2 Service Orchestration	287
16 Ethics and Legal Issues	288
17 Future Direction of System Administration	289
Glossary of Terms	290
A Image Attributions	291
Index	294

Listings

1	Sample command-line invocations	vi
2.1	Simple I/O redirection in the shell	39
2.2	Simple job control in the shell	42
2.3	2-clause BSD license	49
4.1	<code>fdisk(8)</code> sample invocation and output on a Linux system . . .	94
4.2	<code>disklabel(8)</code> invocation and output on a NetBSD system . . .	96
4.3	Absolute and relative pathnames	112
4.4	Output of <code>ls -ai</code>	115
4.5	Output of <code>stat(1)</code>	117
5.1	Excerpt of the boot messages of a NetBSD Xen domU booting in Amazon EC2	132
5.2	Excerpt of the boot messages of a NetBSD system	133
5.3	Excerpt of the <code>hier(7)</code> manual page.	139
5.4	Commands used during the installation of NetBSD	150
5.5	<i>rpm/yum</i> sample commands	156
5.6	<i>pkgrsc</i> sample commands	157
6.1	Excerpt of a typical <code>/etc/passwd</code> file on a NetBSD system . .	172
6.2	Password authentication on the console	179
6.3	SSH key authentication	179
6.4	Kerberos authentication	180
6.5	SSHCA and MFA example	181
7.1	Excerpt of a Puppet “manifest” defining the ‘syslog’ service. .	197
7.2	Excerpt of an LDAP client authentication Chef “recipe” . . .	198
7.3	A CFEngine “agent bundle”	203
7.4	Idempotent and non-idempotent commands.	215
8.1	Script to build GCC on an old IRIX system	230
9.1	The Zen of Python	258
9.2	<code>rc(8)</code> key=value pair configuration	262

9.3 Code Sample: Simple is better than complex 267

List of Figures

1.1	Anthora Coffee Cup	2
1.2	An IBM 704 mainframe	22
2.1	Unix genealogy tree	34
2.2	Standard streams in a simple pipeline	41
2.3	Different systems running Unix	45
4.1	Direct Attached Storage	77
4.2	Three hosts using Network Attached Storage, or <i>NAS</i>	79
4.3	NAS and SAN Hardware	81
4.4	SAN illustrated	82
4.5	Cloud Storage	85
4.6	HDD vs. SSD	87
4.7	Physical Disk Structure	91
4.8	Logical Volume Management	98
4.9	RAID Levels illustrated	101
4.10	Apple Xserve RAID	103
4.10	File System Hierarchy	111
4.11	UFS Details	113
4.12	File Metadata	118
5.1	A typical POST and BIOS screen	130
5.2	Second stage boot loader examples	131
5.3	Types of Software	137
5.4	OpenSolaris Installation	142
5.5	Software Dependency Tree	154
5.6	Screengrabs of tweets illustrating the circular dependencies of language-specific package managers ca. 2014.	158
